Product Details

Let there be light in your office or cubicle... But only when you're around. Use this handy occupancy sensor with your Lucera under cabinet light bars to keep your space illuminated when in use while saving energy when you're gone. If no motion is detected in 15 minutes, the sensor will automatically shut off the under cabinet lights. When the lights are reengaged, they will assume their most recent brightness setting, as controlled by the bars' continuous dimmer.

Compatible with Lucera under cabinet lamps from ESI

Partial assembly required
